## Case Study Summary

### Why HoshinOnline?

Victory Energy knew how important transferring information was between departments which otherwise would result in waste. Victory Energy was looking for a consistent, transfer of information which requires dependable formatting, information placement, consistent 'look' and feel when needed.

*"HOL is very intuitive and easy to use, I would recommend it to anyone, especially if you operate in multiple locations or your departments are spread out across a large campus. I would also like to point out how helpful the staff has been. On a number of occasions I have made specific request about colors, notifications, and adding timed defaults when a KPI was past due. Every question, every request was met with thoughtful curiosity, consideration and in a few days they would come back with a solution."*

*Dennis Cramer, Director Lean Manufacturing & Quality Control*

### Use and impact of HOL -

- HOL fit seamlessly into the manual structure already in place
- Utilizing custom color codes, automatic email reminders and provides visibility over all departments
- High level dashboard to review the overall health of the organization
